The disclosure is objected to because of the following informalities: On page 17, line 1 "70a, 70b" should be changed to --17a, 17b--.

Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 22-27, 32, 38 and 42 are rejected under 35 U.S.C. 102(b) as being anticipated by Bildsoe (U.S. Patent 3,554,360).

Bildsoe shows an elongated flexible conveying element supported by a frame 10, links shown in Figure 3, load-carrying platforms 12 having curved front and rear edges and drive means 190 which includes a driving element 210 that drives a drive element 170 which driven element 170 forms part of the links of the conveying element as is shown in Figure 4.

Re claim 23, the drive is thru frictional contact between a drive means and a friction surface.

Re claim 24, the motor 190 causes linear movement thru a reaction member 202.

Re claims 25-27, the drive means 190 extends to both sides thru reducer 102 and extends under the links as shown in Figure 5.

Re claim 32, the Figures show an overlap at the curved edges.

Re claim 38, no screening is shown.

Re claim 42, shown are at least three supports for the platforms.

Claims 28-31, 33-37 and 39-41 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
